

rotary positive blower silencer

The PULSCO ADVANTAGE

The PULSCO RPBS is engineered to provide stable flow and excellent noise attenuation. Ruggedly constructed, the RPBS represents an effective solution for **silencing suction and discharge noise** from rotary blowers. The RPBS includes several sound absorption acoustic elements that are strategically located in a reactive-type design. The internal configuration will **provide maximum attenuation** for high and low frequencies while **reducing pulsation** to an acceptable level. PULSCO Silencers are coated with superior long lasting inorganic zinc rich primer to ensure protection against the environment.

PULSCO offers **cataloged models** as well as **completely custom solutions** for special requirements.

BENEFITS

- Noise reduction of air flow
- Stabilizes the discharge air flow for a more efficient use
- Easy installation for retrofit or new blower systems
- No spare parts required
- Superior quality standards

RPBS-1905
